Key features

1. Molecule coin (\$MOLC)

1.1. What is \$MOLC?

1.2. Mechanics

1.3. \$MOLC tokenomics

1.4. Wallets info

1.5. Transactions fees

2. Molecule app

3. Team

4. Roadmap

5. Presale

6. Info for developers

Molecule coin (\$MOLC)

1.1. What is \$MOLC?

MOLC is governance and utility token of Molecule Ecosystem.

This is the main and only token that will participate in the management and development of all MSYSTEM products. MOLC token is honestly distributed among the community, which eliminates the possibility of manipulation

1.2. Mechanics

Deflation mechanics

The MOLC token has a deflationary model, which makes it more expensive every day. Deflation is achieved through a unique buyback mechanism. Buyback - function that automatically takes fee of all sell transactions, make a buyback and burns tokens, so the circulating supply decreases constantly.

Redistribution mechanics

Redistribution is one of the many mechanics that reward our holders. If you just hold our tokens on your wallet, you will receive every minute rewards. Which make up 4% of the total transaction fees and are distributed according to the number of your tokens. The more tokens you hold, the more significant your share of the redistribution is.

1.3. \$MOLC tokenomics

Token supply

The distribution of tokens covers all the necessary areas for the successful development and formation of the project. Most of the tokens are reserved for presale and listing on the pancake swap.

The team has the smallest percentage of tokens.

Total Supply	1,000,000,000 \$MOLC
--------------	----------------------

Marketing	75,000,000 \$MOLC
-----------	-------------------

Development	75,000,000 \$MOLC
-------------	-------------------

Team	50,000,000 \$MOLC
------	-------------------

Presale	505,000,000 \$MOLC
---------	--------------------

Pancakeswap	295,000,000 \$MOLC
-------------	--------------------

1.4.1. Wallets information

Development

The wallet tokens from which will be used to improve the application. Despite the fact that the app was developed at our own expense, we want to reach a self-sufficiency model in the near future, so 75 million tokens are being used for development.

Presale

The wallet which we will conduct a presale, all 505 million tokens will be sent to the community.

Pancakeswap

The wallet that will make up the initial liquidity for pancake, 295 million.

1.4.2. Wallets information

Team

The wallet that developers will use for their own needs. Tokens will be sold gradually and will not affect the price in any way. 50 million is a worthy reward for our work.

Marketing

The wallet tokens from which will be used for advertising. Advertising is currently no less important part of the project than the product itself. Therefore, it was decided to send 75 million tokens to promote the project.

Marketing Wallet

Presale and Pancake Wallet

0×7cdc...12A0A4F9FB38 

1.5. Transactions fees

Development

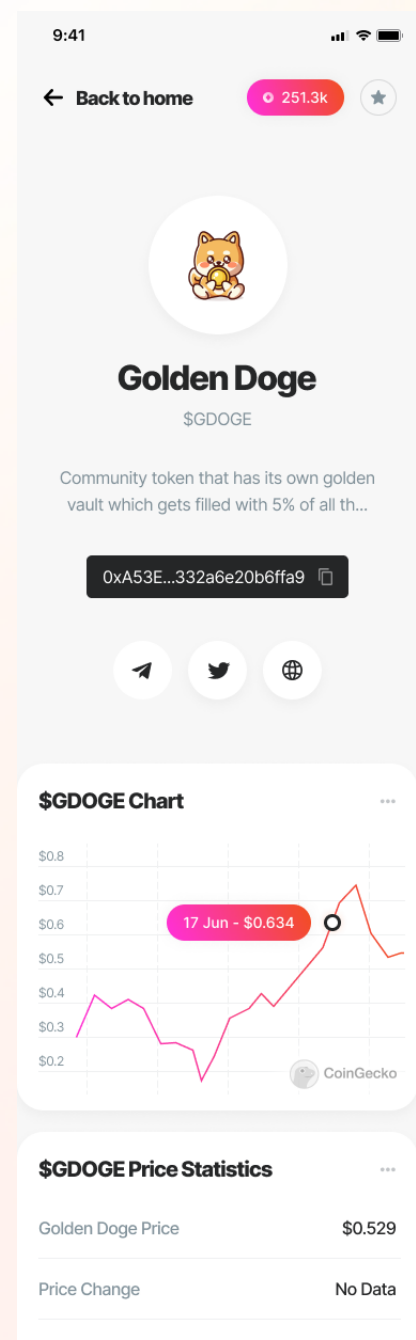

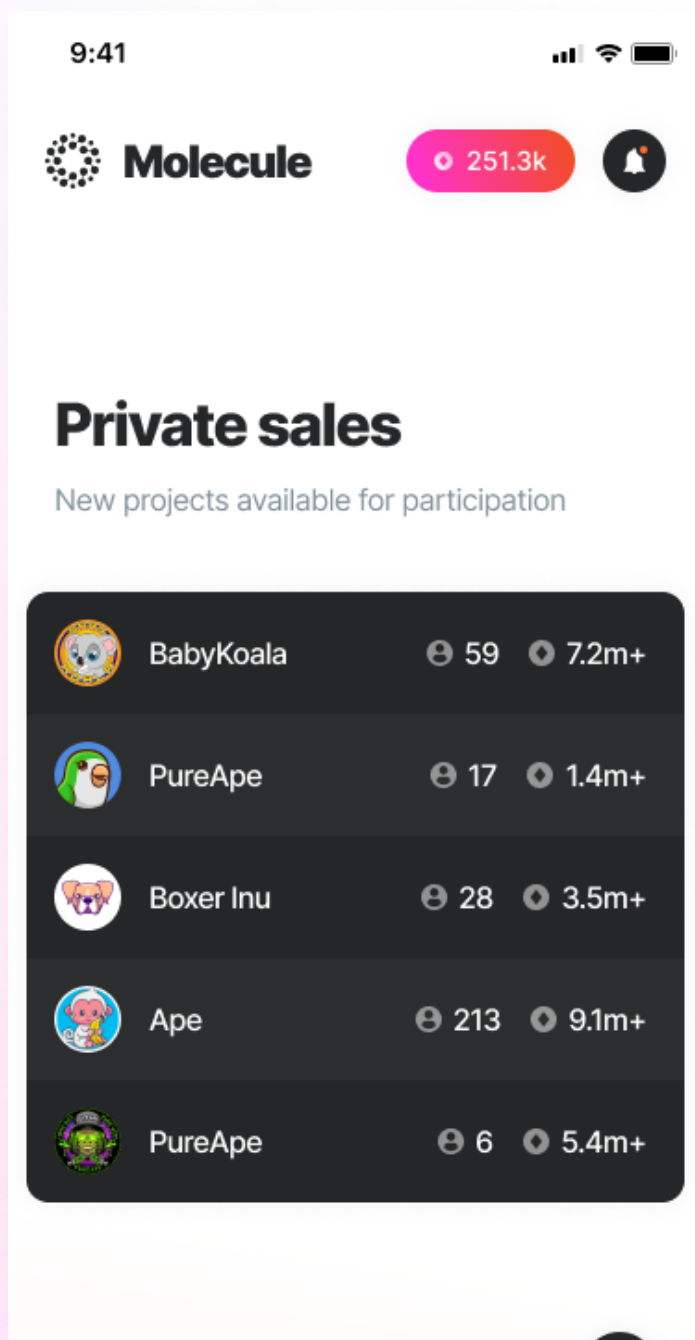

The wallet tokens from which will be used to improve the application.

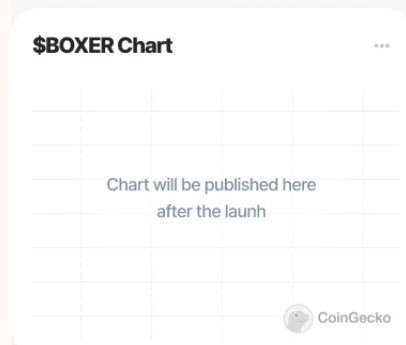

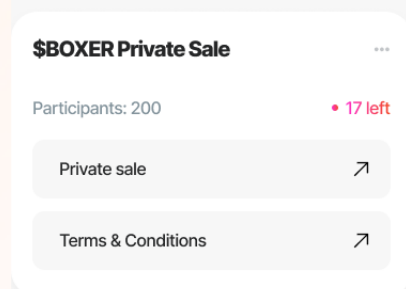

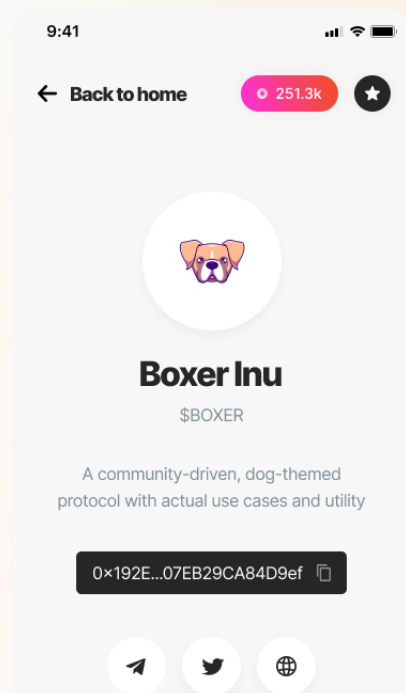

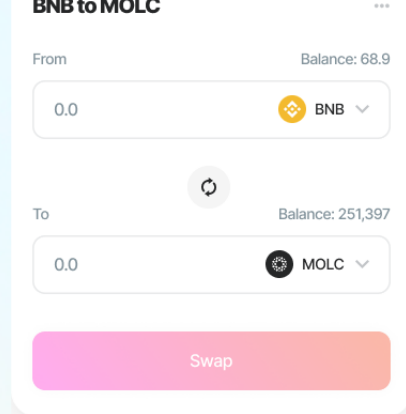

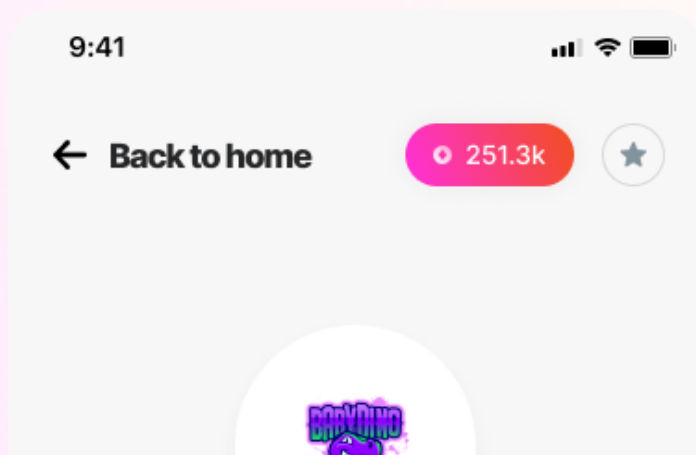

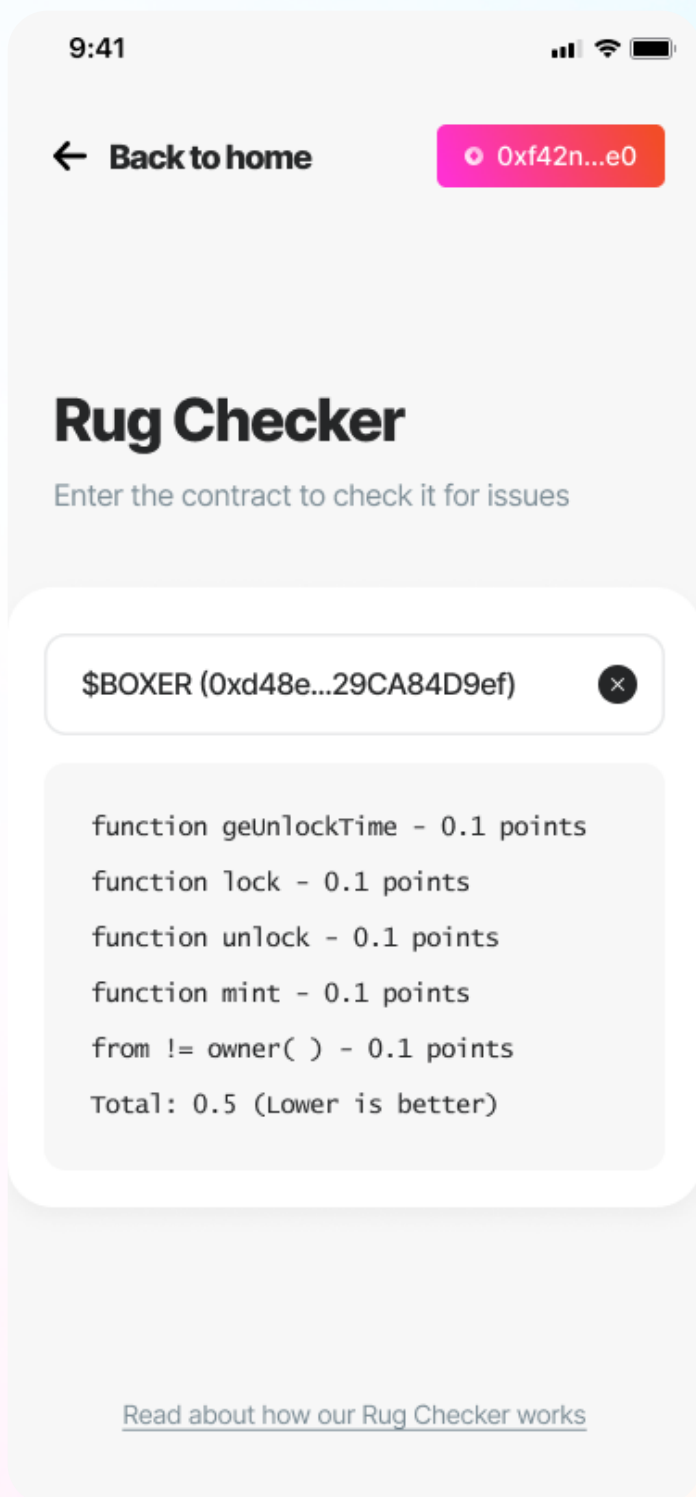

Despite the fact that the app was developed at our own expense.

Marketing fee	3%
Buyback fee	3%
Redistribution fee	4%
Total fee	10%

Molecule app

The first multipurpose, community-driven mobile app for placing new coins, private sales, token exchange and discussions. This application will provide investors in small-cap projects with everything they need.

2.1.1. Placing platform

Designed specifically for mobile devices

The application is fully adapted to any smartphones or tablets, you do not have to search for a website and log in to it every time. All conditions are created for fast and comfortable work.

Strict verification of projects

Many platforms for placing new coins are filled with obvious scam projects or useless garbage. We will not allow this. Due to strict moderation, only reliable projects that have managed to prove their transparency will be placed in our application.

Express your honest opinion about the project

Now it is difficult to find a new useful project because of the cheating of votes. We solve this using a strict anti-bot system, in addition, the application format itself significantly complicates the process of cheating votes. The last stage of protection - it is necessary to have at least a minimum number of our tokens in order to vote and comment.

2.1.2. Placing platform

Notifications system for presales and listings

When you choose several projects at once, it is difficult to keep track of listings and pre-sales. In order for you not to miss any of your favorite projects anymore, we have developed an internal notification system.

All necessary information for DYOR

To save you time, we decided to collect and post absolutely all the data about the project in one place.

Integrated graphs and charts for coin analysis

Another useful feature that will save you time and eliminate the need to use third-party resources.

2.2. Private sales platform

The platform is an intermediary

Between the project and the private sale participant, which guarantees the security of your funds. If the project turns out to be a scam despite our verification, the money will be returned to investors, and the project will remain without funds.

Implemented in a mobile app

You can connect any mobile wallet to our application in a couple of seconds, which is poorly implemented on websites.

Strict selection of projects

In order to reduce the chances of a scam, our team carries out serious checks of the smart contract, team members and the product.

2.3. Utilities platform

Rug Pull Checker

You will be able to use our rug pull checker for any coins, even if they are not in our app.

Swiss Army App

All tools for investing in one application, a full-fledged, absolutely free.

Whatever you need

You will not need to use third-party sites, you will not have any problems connecting your wallet with \$MOLC and tokens of our partners can be purchased directly in the app in a couple of clicks.

2.4. Opportunities for holders

Fair discussion

Only \$MOLC holders will be able to vote for tokens and leave comments (this will help to avoid fraud and at the same time reward the holders).

Private sales

\$MOLC holders will have access to the private sales section.

Redistribution

\$MOLC holders will receive redistribution.

Roadmap

Announcement of dxsale presale	27 Aug 00:00 UTC
Advertising to the presale	27 Aug 05:00 UTC
Start of the presale	29 Aug 00:00 UTC
Presale end + token distribution stage	1 Sep 00:00 UTC
Advertising to the pancake launch	1 Sep 00:00 UTC
Pancakeswap listing	1 Sep 05:00 UTC
CoinGecko + CoinMarketCap listing	5 Sep 00:00 UTC
Molecule app launch	Coming soon
